Professional summary

Full-stack .NET developer with proven experience building and supporting Microsoft Dynamics 365 and Azure solutions for New Zealand government justice sector applications. Joined the New Zealand Parole Board Hearing Management System (PBHS) at go-live and led Early Life Support, resolving production defects, performing root cause analysis, and delivering rapid hot fixes that kept a critical national system stable under pressure.

Delivered custom C# plugins on Dataverse, Power Platform flows in Power Automate, and Azure Integration Services through Azure Logic Apps and REST APIs that bridge modern Dynamics 365 with legacy .NET systems. Strong full-stack capability across C#, .NET Framework, ASP.NET Core, Oracle PL/SQL, SQL Server and JavaScript on large enterprise codebases. Maintain an active personal portfolio in TypeScript, React/Next.js and Python, and use AI coding agents daily to accelerate investigation, development and remediation.

Experience

Developer, DXC Technology

September 2025 – Present

Dynamics 365 development and plugins

- Designed and delivered custom C# plugins on Dynamics 365 that automated complex business logic and orchestrated dependent updates across hearing and decision workflows.
- Delivered production bug fixes and features while supporting testers and contractors, and produced clear documentation that improved hand-over for future support engineers.

Integration and automation

- Built and stabilised Power Platform Cloud Flows and Azure Integration Services, using Azure Logic Apps and REST APIs, that integrated PBHS with the legacy IOMS .NET system and kept data exchange reliable between modern and legacy systems.
- Diagnosed and resolved integration failures across Azure services, maintaining continuous operation of critical inter-system processes.

Production support and go-live

- Provided production support during PBHS go-live and Early Life Support, performing root cause analysis with Azure monitoring and logging tools, and delivering rapid hot-fixes that maintained system stability for the New Zealand Parole Board.
- Leveraged AI coding agents (Claude Code) daily to accelerate investigation, code search and remediation, improving delivery velocity and quality during high-pressure support windows.

Collaboration and delivery

- Partnered with the Business Lead, Release Manager, Tech Lead, IOMS team, and Account Run Lead on release management and stakeholder communication through a complex inter-system rollout.

Associate Developer, DXC Technology

February 2024 – September 2025

Full-stack development and legacy modernisation

- Delivered feature enhancements and production bug fixes across the full stack of the Integrated Offender Management System (IOMS): Oracle PL/SQL and SQL Server, C# on .NET Framework with ASP.NET MVC and WCF services, and Kendo UI for jQuery / JavaScript on a 20+ year enterprise codebase used daily across Corrections.
- Modernised legacy code as part of ongoing system uplift, applying established data patterns to improve long-term maintainability of a large, complex platform.
- Built deep domain knowledge of the IOMS model (offenders, victims, sentences, transfers) and the patterns that enforce data integrity and audit traceability.

Delivery practices

- Delivered work across multiple test environments under a monthly release cadence, using Azure DevOps and TFS for source control, work tracking and CI/CD.
- Contributed to code review, pair programming, release management and technical documentation that improved long-term maintainability of a large enterprise system.

Projects

Personal portfolio

<https://brendan-jarvis.vercel.app>

Modern serverless developer portfolio and technical blog built with Next.js (App Router), TypeScript, Tailwind CSS v4, and Auth.js with OAuth. Deployed on Vercel with continuous deployment.

TECHNOLOGIES · Next.js, TypeScript, React, Tailwind CSS, Auth.js, OAuth, Vercel, Supabase.

ArchiSteamFarm, QR code login

<https://github.com/JustArchiNET/ArchiSteamFarm/pull/3618>

Added QR code login to an open-source C# command-line utility built on SteamKit2. An account without a saved session can authenticate by scanning a code in the Steam mobile app. Built with Grok Build.

TECHNOLOGIES · C#, .NET, SteamKit2, QR code generation, Grok Build.

Education

Certificate in Applied Software Development

Dev Academy · 2022

Professional Legal Studies

College of Law · 2018

Admitted Barrister and Solicitor of the High Court of New Zealand.

Bachelor of Laws (LLB) and Bachelor of Science in Chemistry (BSc)

University of Otago · 2011–2015

Additional Computer Science and Web Development study.

Technical skills

LANGUAGES	C#, TypeScript, JavaScript, Python, SQL (Oracle PL/SQL, SQL Server), HTML, CSS.
MICROSOFT	ASP.NET Core, .NET Framework, Dynamics 365, Dataverse, Power Platform, Power Automate, Azure Integration Services, Azure Logic Apps, REST APIs, Azure Storage, API Management.
FRONTEND	React, Next.js, Tailwind CSS, shadcn/ui, Kendo UI for jQuery.
CLOUD	Azure, Azure DevOps, CI/CD, Git, GitHub, GitHub Actions, TFS, Vercel.
TOOLS	Claude Code, Visual Studio, VS Code, Cursor, Neovim, PowerShell, WSL/Linux.
